The Autism Spectrum Quotient (AQ) is a questionnaire published in 2001 by Simon Baron-Cohen and his colleagues at the Autism Research Centre in Cambridge, UK. It consists of fifty questions and aims to investigate whether adults of average intelligence have symptoms of autism spectrum conditions. More recently, versions of the AQ for children and adolescents have also been published.

IDA 2 is a best practice developmental assessment for infants and toddlers that measures all domains of child development and behavioral health. IDA is a valid and reliable measure that meets IDEA federal requirements and aligns with OSEP early childhood and Head Start child outcomes.

Summary points:
- Developmental assessment is the process of mapping a child's performance compared with children of similar age. The comparison group is obtained from a representative sample of the population that the child comes from.
- Several factors contribute to performance, varying greatly between different population groups.
- In a multicultural society, it can be challenging to find reliable and valid assessment tools.

Lecture 17 Developmental Assessments: Study Guide by VLMichalik includes 53 questions covering vocabulary terms and more. Quizlet flashcards, activities, and games help you improve your grades.

Policy Note 0444: There are several states which mandate benefits for early intervention programs. Some specific plan sponsors may offer benefits for these services. Coverage of component services of the intervention programs such as speech therapy, physical therapy, and occupational therapy will be extended when the child presents.
